

Perfect PDF & Print 9

Test of Perfect PDF 9 Premium in ct 3/2015: "... result: Perfect PDF offers an advantageous user interface, intelligent functionality and some useful detail solutions, especially for creating and editing PDF forms..."

These test results refer to Perfect PDF 9 Premium (vergleich.org) and to versions 6 (PC-WELT) and 5 ("Sieger Preis-Leistung"- "Winner Price vs. Performance", "gut" - „Good“) Current test results: see <http://en.soft-xpansion.eu/customers/press/>

Perfect PDF & Print 9 comes with two solutions in one product: *Perfect PDF 9 Premium* and *Perfect Print 9*. It enables users to efficiently work with PDF, PDF/A and XPS files and at the same time creates professional printing output on paper.

Optimize & standardize printing output from different applications

Perfect Print 9 standardizes and unifies the content design from different source applications (for example word processing, graphical software or CAD solutions) in one single printing project. In this project, potential limitations of the source applications' printing capabilities are eliminated.

Professionally create, convert, edit and view PDF, PDF/A and XPS

Perfect PDF 9 Premium enables users to comfortably create, quickly convert, extensively edit, and to professionally comment PDF, PDF/A and XPS files. The program may be used to add digital signatures to these files in a legally reliable way, to encrypt them and to send

them by e-mail. Besides, the content of pairs of PDF files can be compared, the program includes a powerful image editor and several pages can be combined in larger formats. Finally yet importantly, PDF forms can be created, filled in and saved.

The *Perfect PDF 9 Premium* application is not only made for the creation of PDF, PDF/A and XPS files, transforming any content that can be printed from within another application (using the „Print“ menu). Rather, it can also create these files directly in Windows Explorer, in Microsoft Office and in OpenOffice.org.

Perfect PDF 9 Premium includes an OCR module that recognizes text in scanned documents, enables users to search through this text and to export it into a separate file. It also enables users to create PDF/A-1, PDF/A-2 and PDF/A-3 files. Thus, the scope of PDF/A files created with *Perfect PDF 9 Premium* is wide: In contrast to PDF/A-1, PDF/A-2 allows transparencies (for example highlighting or special presentations) or JPG2000 as lossless compression format (for photos and other image elements). Moreover, with PDF/A-2, PDF/A files may be embedded into other PDF/A files. Last but not least, layers are allowed, which is for example useful in PDF files that are based on CAD software applications. PDF/A-3 enables the user to embed any file type into PDF/A, not only PDF/A itself. As a result, even the source file may be embedded into PDF/A-3. For example, electronic invoice data in XML format plus its "archive version", a PDF version of the invoice document, may be collected in one single PDF/A file.

The program's ribbon interface as well as its groups and tabs concentrate features that belong together more clearly, thus enabling the user to find them more quickly. In detail, *Perfect PDF 9 Premium* offers the following features:

Integration into other Programs

The integration into Microsoft applications (Word, Excel, PowerPoint, Visio, Project, Outlook), OpenOffice (Writer, Calc, Impress, Draw, Base, Math) and Windows Explorer gives the possibility to create PDFs with just a few mouse clicks only! Moreover, the Microsoft Office integration does not only convert files and visible objects, but also imports links (internal and external), the table of contents, form fields, comments and even the Word index into the resulting PDF file. The Windows Explorer integration ensures the quick conversion of single files or groups of files with the help of a comprehensive context menu, using the right mouse button.

Import Meta Data

Powerful PDF Editor

Perfect PDF 9 Premium may be used to quickly and flexibly change the structure of PDF documents by inserting, editing or deleting complete pages from various source documents. Apart from that, adding texts, images and vector objects is possible. Texts may be edited with commonly known tools and features like font settings, paragraph formatting, frames and borders, or highlighting.

Other objects, like watermarks, headers and footers, stamps and auto text fields (for example date, file name or author), are available as well.

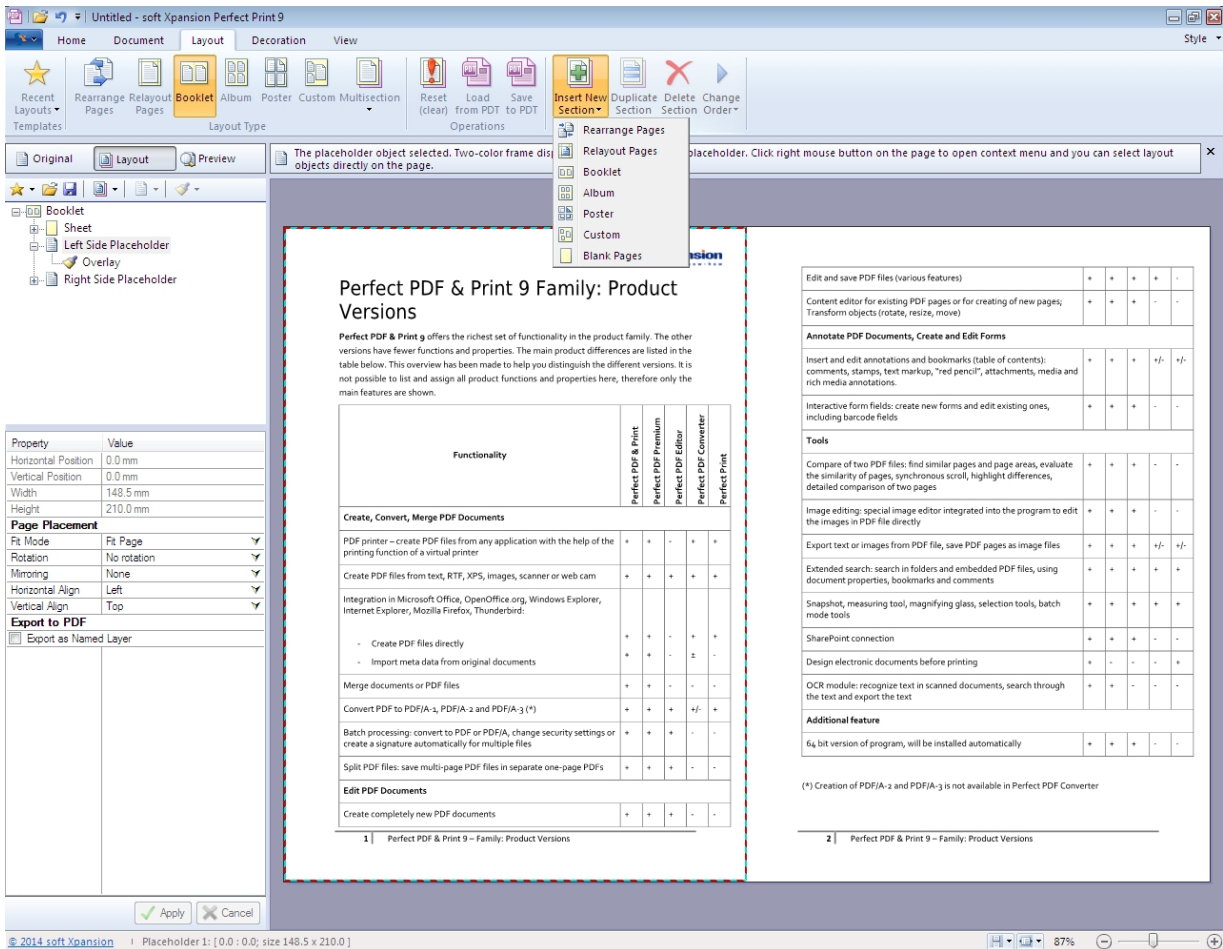

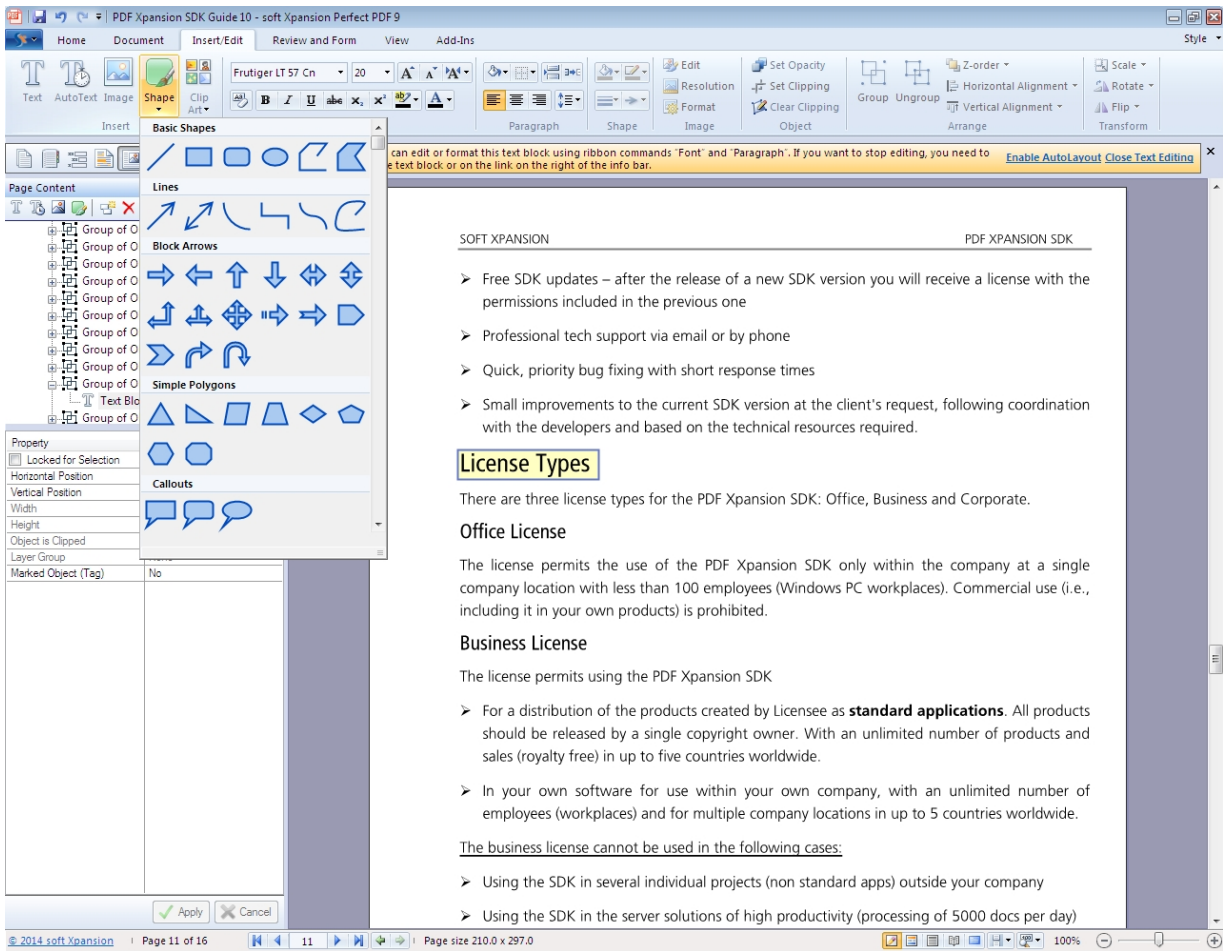

Comments, Forms, Digital Signatures and Bar Codes

Perfect PDF 9 Premium also offers a large variety of annotations that can be inserted into PDF files. With these annotations, collaboration during the work on a document will be quicker and more efficient. For example, it is possible to add text comments, stamps, sticky notes, markups and audio or video comments and to play audios and videos from within the PDF file. Annotations are placed directly in the document window and additionally in a separate program window area. This area shows the annotations in a clearly arranged hierarchical structure, which makes it easier to follow and manage them. Digital signatures can also be implemented step by step in consecutive, clearly arranged program dialogues. The certificates that are used to verify signatures may come from smart cards, e-tokens or PFX files. *Perfect PDF 9 Premium* offers special bar code fields for the creation and placing of two-dimensional bar code images in PDF forms.

The program includes several tools and Add-Ins that make it easier to work with PDF files and with the PDF content. The following features are available in this context:
